

ARGONNE NATIONAL LABORATORY

INTRA-LABORATORY MEMO

November 05, 2003

TO: J. Behrndt, J. Carwardine, R. Emerson, M. Fagan, N. Friedman, P. McNamara, V. Nguyen, J. Servino, S. Ross

SUBJECT: Generation-3 Meeting

- Generation-3 Web pages are available;
 - The following three categories are currently available now. Information and handouts were given on where to go to access the information.
 - Group Meeting Status
 - Project Meeting Minutes
 - PSS Bill of Materials and Cost Estimates
- PSS Station access when the Front End Shutters (FES) are closed:
 - Issue - The users would like unrestricted access to their stations whenever the FES is closed. This issue has generated much discussion in the past and continues to generate serious discussion.
 - This discussion consumed most of the meeting without resolution. Those present were asked to e-mail their comments and suggestions to R. Emerson prior to the next weekly meeting.
- 15-U Block Diagram and Circuit Board
 - Steve Ross had a prior commitment, the 15-U discussion was tabled for the next meeting.
- Safety Concerns
 - Jon Hawkins noted - When part of the Safety System fails do you assume the remainder of the System is OK. This is part of the issue surrounding station access with Front End Shutters closed. The common reason users can not access the stations is a Serious Fault keeping the doors locked on the stations. See http://www.aps.anl.gov/asd/esystems/Interlock_Sys/PSS/FaultDescr/PSSFaultOperationandTagNameDescriptions.htm for more information.

Attendees:

Anne Boron, Jon Behrndt, Roy Emerson, Mike Fagan, John Forrestal, Nick Friedman
Jon Hawkins, Phillip McNamara, Van Nguyen, Steve Ross, John Servino
